416-272-7198 | Manraj.BA188@gmail.com | www.linkedin.com/in/manraj-bal-a76a24388

Technical Skills

Languages: C, Java, Python, JavaScript, HTML, CSS, SQL

Frameworks: React, Angular, Node.js, Express.js, scikit-learn, Pandas, NumPy, Matplotlib

Developer Tools: Git, VSCode, StackOverflow

Professional Experience

Web Development Intern

June 2022 – August 2023

Pearl Banquet Hall

Toronto, ON

- Designed and developed the official Pearl Banquet Hall website to enhance online visibility and client engagement.
- Implemented responsive front-end layouts using HTML, CSS, and JavaScript, ensuring a seamless user experience across all devices.
- Optimized website performance and integrated SEO strategies, contributing to a significant increase in web traffic and customer inquiries.
- Collaborated directly with management to update event galleries, pricing information, and booking forms to improve user interaction and conversion rates.
- Stack:** HTML, CSS, JavaScript, Google Analytics

Selected Projects

Premier League Game Predictor | Jupyter Lab, Python (Pandas, scikit-learn), Kaggle

Datasets, Matplotlib

August 2025

- Developed a Premier League match outcome predictor using machine learning models trained on historical match data from Kaggle. The system analyzes team form, goals scored/conceded, and venue data to predict win/loss probabilities.
- Cleaned and processed over 10,000 match records using Pandas, engineered features such as rolling averages and goal differentials, and visualized performance trends with Matplotlib.
- Implemented classification models with scikit-learn (Random Forest, Logistic Regression) to evaluate accuracy and optimize predictive performance.
- Deployed and tested the model in Jupyter Lab with user-friendly input functions to predict outcomes for any Premier League fixture.

Stock Market Predictor | Python, Jupyter Lab, scikit-learn, yFinance, Pandas,

Matplotlib

August 2025

- Developed a machine learning model in Python to predict S&P 500 stock price movements and generate buy/sell recommendations with approximately **65% accuracy**.
- Collected and preprocessed historical market data using the yFinance API and Pandas, calculating technical indicators such as moving averages and volume trends.
- Trained and optimized Random Forest and Logistic Regression models using scikit-learn to forecast short-term market direction.
- Visualized model performance and prediction accuracy with Matplotlib, comparing predicted vs. actual price trends over time.
- Designed an interactive interface in Jupyter Lab where users can input a stock symbol to receive real-time buy/sell predictions based on live market data.

Education

Toronto Metropolitan University (Formerly Ryerson)

September 2024 – Present

Bachelor of Science in Computer Engineering

Toronto, ON
